Webhook retry causes duplicate orders

+

⋮

↶

Key details

Description

When the storefront webhook is not acknowledged within 200ms and the platform retries, the system creates a second duplicate order instead of recognizing the retry as the same order.

Expected: duplicate webhook should be detected via order ID and ignored.

Actual: a new order and duplicate supplier PO are created.

Tracking number field accepts empty string

+

...

Key details

Description

The tracking number submission form allows a Supplier Partner to submit an empty value, which gets saved as a valid tracking number.

Expected: the field should require a non-empty value before submission is accepted.
Actual: empty submissions are saved and shown to the customer as "tracked."
